API Agent-Sales

Each sales agent will be returned a record that corresponds to a maintainer and includes the number of merchants, the discount, the number of transactions and license information.

Anfrage
`GET <server>/api/supervisors/turnover`

Query Parameter

Name	Example	Description
from	2019-07-01	Date query from
to	2019-08-01	Date query to
$top	100	Submit 100 entries
$skip	0	Skip entries

Return Wert

Answer

```json
{
  "totalCount": 1234,
  "value": [
    {
      "supervisorNumber": "1234",
      "tenantCount": 5,
      "sumDisagio": 27.12,
      "transactionCount": 5,
      "licenceSum": 25.12,
      "licences": [
        {
          "licenceName": "light",
          "licenceCount": 4,
          "licenceSum": 25.12
        },
        ...
      ]
    },
    ...
  ]
}
```

Name	Example	Desription
supervisorNumber	1234	Number of the sales agent
tenantCount	5	Number of merchants assigned to this sales agent.
sumDisagio	27.12	Amount of the discount of the transactions settled during this period.
transactionCount	5	Number of transactions settled during this period
licenceSum	3	Total of royalties charged during this period
licences		Information about the licenses (ATTENTION: This field will be integrated in another version of the API or is empty)
licences.licenceName	light	Name of the license

Name	Example	Description
licences.licenceCount	4	Number of licenses
licences.licenceSum	25.12	Sum of the licenses billed for this package during the period.

> ✅ **TIP**
> The API implements a paging. If there are more than 100 entries, the request must be executed multiple times with the $ top and $ skip parameters to retrieve all the data.

> ⚠️ **Note**
> The data for the transactions are always provided with the billing date. For royalties, the transaction will not be visible until the payment date in the API. This may result in delays between the actual transaction from the merchant and the ad in the API.
